

How to Use the Pedro's Chain Machine

1. Oriented as shown, position derailleur hook arm vertically pointing downward to allow the top body to be removed.
2. Position over chain as shown to begin reinstalling top body.
3. Rotate derailleur hook arm towards the derailleur as shown, and hook it around the lower pulley cage of the derailleur.
4. Add about 25ml of degreaser through the top body as shown. The arrow in step 4 points to the degreaser release button. Push the red release button to release degreaser.
5. Backpedal the drivetrain making sure the chain goes through at least 3 full cycles.
6. Remove Chain Machine for the chain by rotating the derailleur hook arm to position shown, releasing the top body. Empty dirty degreaser and rinse with water.
7. (Graphics 7,8,9) Repeat steps 1-6 using water instead of degreaser. Pedro's Oranj Peelz is water soluble and is easy to remove from the chain with water. Finally, wipe water from the chain and let dry.
